These workers not only can find out the deficiencies [CTAL-SEC_DACH](#) of their knowledge in the mock exam but also can accumulate experience for the CTAL-SEC_DACH examination, which will definitely conducive to relieve their stress as well as strengthening their confidence for the CTAL-SEC_DACH exam test.

IT professional knowledge and experience, which need to master **Actual CTAL-SEC_DACH Test Pdf** abundant IT knowledge and experience to pass, All of us want to spend less money and

little time for ISTQB Certified Tester Advanced Level. Security Tester exam.

To sort out the most useful and brand-new contents, they have been keeping close eye on trend of the time in related area, so you will never be disappointed about our CTAL-SEC_DACH test engine questions once you make your order.

NEW QUESTION: 1

Which two Cisco IOS XE commands can install a subpackage onto a router? (Choose two.)

- A. boot system flash bootflash:filename
- B. issu loadversion rp identifier file diskType imageFilename
- C. license install file storedLocationUrl
- D. config-register value
- E. request platform software package install rp rpSlotNumber file fileURL
- F. copy sourceUrl destinationUrl

Answer: E,F

Explanation:

- Managing and Configuring a Consolidated Package Using the request platform software package install Command In the following example, the request platform software package install command is

used to upgrade a consolidated package running on RP 0. The force option, which forces the upgrade past any prompt (such as already having the same consolidated package installed), is used in this example.

```
Router# request platform software package install rp 0 file bootflash:asr1000rp1-
```

```
adventerprisek9.02.01.00.122-33.XNA.bin force
```

To upgrade a consolidated package on the Cisco ASR 1000 Series Routers using the

command, copy the consolidated package into the bootflash: directory on the router using

the copy command as you would on most other Cisco routers.

After making this copy,

configure the router to boot using the consolidated package file.

In the following example, the consolidated package file is copied onto the bootflash: file

system from TFTP. The config-register is then set to boot using boot system commands,

and the boot system commands instruct the router to boot using the consolidated package

stored in the bootflash: file system. The new configuration is then saved using the copy

running-config startup-config command, and the system is then reloaded to complete

the process.

```
Router# dir bootflash:
```

```
Directory of bootflash:/
```

```
