**NEW QUESTION: 1**

Your database Machine has the exachk utility pre-installed and you decide to use it periodically, to validate the installation against Oracle's recommended best practices.

Which two actions could you take to do this?

- A. Use a cron job on a database node to run it at regular intervals.
- B. Run it once from a database node and it will then perform periodic monitoring automatically.
- C. Run it once on each cell and it will then perform periodic monitoring automatically.
- D. Use a cron job on each cell to run it at regular intervals.
- E. Create a Job in Enterprise Manager to run the exachk utility at regular intervals.

**Answer: A,E**

**NEW QUESTION: 2**

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario.

You work for a company named Contoso, Ltd.

The network contains an Active Directory forest named contoso.com. A forest trust exists between contoso.com and an Active Directory forest named adatum.com. The contoso.com forest contains the objects configured as shown in the following table.

Group1 and Group2 contain only user accounts.

Contoso hires a new remote user named User3. User3 will work from home and will use a computer named Computer3 that runs Windows 10. Computer3 is currently in a workgroup.

An administrator named Admin1 is a member of the Domain Admins group in the contoso.com domain.

From Active Directory Users and Computers, you create an organizational unit (OU) named OU1 in the contoso.com domain, and then you create a contact named Contact1 in OU1.

An administrator of the adatum.com domain runs the Set-ADUser cmdlet to configure a user named User1

to have a user logon name of [\[email#160;protected\]](#)

End of repeated scenario.

You need to ensure that Admin1 can add Group2 as a member of Group3.

What should you modify?

- A. Set Admin1 as the manager of Group3.
- B. Add Admin1 to the Enterprise Admins group
- C. Modify the group type of Group3.
- D. Modify the group scope of Group3.
- E. Modify the Security settings of Group3.

**Answer: D**

Explanation:

Explanation/Reference:

Explanation:

A domain local group (group2) can only be a member of another domain local group. Therefore, we need to change the scope of Group3 from Universal to Domain Local.

**NEW QUESTION: 3**

Sara, a security analyst, is trying to prove to management what costs they could incur if their customer database was breached. This database contains 250 records with PII. Studies show that the cost per record for a breach is \$300. The likelihood that

their database would be breached in the next year is only 5%. Which of the following is the ALE that Sara should report to management for a security breach?

- A. \$15,000
- B. \$1,500
- C. \$75,000
- D. \$3,750

**Answer: D**

Explanation:

Explanation/Reference:

Explanation:

$SLE \div ARO = ALE$ , where SLE is equal to asset value (AV) times exposure factor (EF); and ARO is the annualized rate of occurrence.

$SLE = 250 \times \$300$ ;  $ARO = 5\%$

$\$75000 \times 0.05 = \$3750$
