NEW QUESTION: 3

A. Option A
B. Option C
C. Option E
D. Option D
E. Option B
Answer: A
Explanation:
Explanation
Schema objects are referenced with varying usage patterns;
therefore, their cache behavior may be quite different.
Multiple buffer pools enable you to address these differences.
You can use a KEEP buffer pool to maintain objects in the
buffer cache and a RECYCLE buffer pool to prevent objects from
consuming unnecessary space in the cache. When an object is
allocated to a cache, all blocks from that object are placed in
that cache. Oracle maintains a DEFAULT buffer pool for objects
that have not been assigned to one of the buffer pools.
