Virtual switches/
Hyper-V VLAN - you can create 3 different types of virtual switches depending the needs of your virtual machines and one single machine can use multiple virtual NICs that is member of different Virtual Switches.

External - This virtual switch binds to the physical network adapter and create a new adapter you can see in Control Panel\Network and Internet\Network Connections so if a virtual machine needs contact outside the host machine this one is a must.

Internal - This virtual switch can be used to connect all virtual machines and the host machine but cannot go outside that.

Private - This virtual switch can only be used by the virtual host
