## **NEW QUESTION: 2**

Robert is the project manager of the NHH Project and is working with his project team to create the WBS for his organization. He has a project scope statement that needs to be broken down into smaller, more manageable components. He would like to organize the components by project phase to help organize the deliverables created in each phase of the project. What is the technique that breaks down the project scope into the WBS?

**A. Requirements breakdown**

**B. Decomposition**

**C. Subdivision**

**D. Functional analysis**

**Answer: B**

Explanation:

Explanation/Reference:

Explanation:

Answer option B is correct.

The breakdown of the project scope into the WBS and its elements is called decomposition.

What is a Work Breakdown Structure (WBS)?

A Work Breakdown Structure (WBS) in project management and systems engineering is a tool that defines a project and groups the project's discrete work elements in a way that helps to organize and define the total work scope of the project. A Work Breakdown Structure element may be a product, data, service, or any combination. The WBS also provides the necessary framework for detailed cost estimating and control along with providing guidance for schedule development and control. Additionally, the WBS is a dynamic tool and can be revised and updated as needed by the project manager.

Answer option D is incorrect. Subdivision does describe the decomposition of the project scope into the WBS, but it's not the technical name for the technique of creating the WBS.

Answer option A is incorrect. Requirements breakdown is not the correct definition of the creation of the WBS.

Answer option C is incorrect. Functional analysis analyzes how something works and is sometimes used with configuration management.

### NEW QUESTION: 3

Which of the following about BGP loops in a VPRN environment is FALSE?

- A. When the CLI command "config>router>bgp# loop-detect discard-route" is used, the Alcatel-Lucent 7750 SR sends a notification to the remote peer and drops the BGP session.
- B. Traditional BGP loop detection mechanisms may detect a loop in the VPRN scenario, which in fact is not present.
- C. The Alcatel-Lucent 7750 SR accepts routes containing AS\_PATH loops by default.
- D. In VPRN implementations where the CE-PE protocol is BGP, it is possible for separate sites of the same customer to use the same BGP autonomous system number.

**Answer: A**

### NEW QUESTION: 4

You manage a software-as-a-service application named SaaSApp1 that provides user management features in a multi-directory environment.

You plan to offer SaaSApp1 to other organizations that use Azure Active Directory.

You need to ensure that SaaSApp1 can access directory objects. What should you do?

- A. Configure the Federation Metadata URL
- B. Configure the Graph API.
- C. Register SaaSApp1 as a web application.
- D. Register SaaSApp1 as a native client application.

**Answer: B**

Explanation:

The Azure Active Directory Graph API provides programmatic access to Azure AD through REST API endpoints. Applications can use the Graph API to perform create, read, update, and delete (CRUD) operations on directory data and objects. For example, the Graph API supports the following common operations for a user object: / Create a new user in a directory / Get a user's detailed properties, such as their groups / Update a user's properties, such as their location and phone number, or change their password / Check a user's group membership for role-based access / Disable a user's account or delete it entirely
