NEW QUESTION: 2

Which statement is FALSE concerning Concatenation?

I. It reduces upstream data throughput.

II. It allows ITCM to send multiple upstream packets in one single large burst.

III. It can be enabled/disabled from CMTS on per upstream port basis if desired

IV. Concatenation activity on an interface can be checked by the show controller counters command

Answer: A

Answer: A

Answer: A

Answer: A

Answer: A

Answer: A

Answer: A

Answer: A

Answer: A

Answer: C

Explanation:

If there is no monetary amount in the database for existing inventory, inventory will be understated. Moreover, inadequate edit checks or uncontrolled borrow/paybacks could cause negative quantities to be reported. This condition would cause inventory to be understated. If the amount ordered exceeds requirements, the result is an increase in inventory. However, by itself, this condition would not cause inventory to be understated or overstated. Also, if lead times are longer than delivery times, the effect is an increase in inventory but not necessarily a misstatement.

NEW QUESTION: 3

You are using an Amazon EC2 instance with an Amazon EBS volume. The instance is running an application that generates a large amount of data. You want to ensure that the data is not lost in the event of a failure. Which of the following actions should you take to ensure data durability?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

Explanation:

Amazon EBS provides high availability and durability for your data. To ensure data durability, you should create a multi-availability zone (AZ) architecture. This involves creating an Amazon EC2 instance in one AZ and an Amazon EBS volume in another AZ. This ensures that your data is replicated across multiple AZs, providing high availability and durability. Additionally, you should enable Amazon EBS Snapshots to create point-in-time copies of your data. This ensures that your data is protected in the event of a failure. Therefore, the correct answer is B, which involves creating a multi-AZ architecture and enabling Amazon EBS Snapshots.
