NEW QUESTION: 3

A. Option D
B. Option C
C. Option A
D. Option B
Answer: D
Explanation:
Selective authentication between forests
If you decide to set selective authentication on an incoming
forest trust, you need to manually assign permissions on each
computer in the domain as well as the resources to which you
want users in the second forest to have access. To do this, set
a control access right Allowed to authenticate on the computer
object that hosts the resource in Active Directory Users and
Computers in the second forest. Then, allow user or group
access to the particular resources you want to share.
Reference: Accessing resources across forests

NEW QUESTION: 4

A. Option C
B. Option E
C. Option A
D. Option B
E. Option D
Answer: D,E
Explanation:
B: Oracle 11.2 introduced appvipcfg utility for creating VIPs.
From the GRID_HOME/bin directory run the appvipcfg command to
create the application VIP. Oracle Clusterware assigns this VIP
to a physical server in the cluster and will migrate the VIP to
a surviving node in the cluster in the event of a server
failure.
Example: appvipcfg create -network=1 -ip=192.168.20.111
-vipname=MyTestVIP - user=grid D: While you can add a VIP in
the same way that you can add any other resource that Oracle
Clusterware manages, Oracle recommends using the script
Grid_home/bin/appvipcfg to create or delete an application VIP.
