#### **NEW QUESTION: 1**

Which command would you use on a Cisco router to verify the Layer 3 path to a host?

- A. telnet address
- B. traceroute address
- C. tracert address

**D.** ssh address

**Answer: B**

Explanation:

In computing, traceroute is a computer network diagnostic tool for displaying the route (path) and measuring transit delays of packets across an Internet Protocol (IP) network.

The history of the route is recorded as the round-trip times of the packets received from each successive host (remote node) in the route (path); the sum of the mean times in each hop indicates the total time spent to establish the connection.

Traceroute proceeds unless all (three) sent packets are lost more than twice, then the connection is lost and the route cannot be evaluated. Ping, on the other hand, only computes the final round-trip times from the destination point.

**NEW QUESTION: 2**

Given:

Which statement will iterate through Direction?

- A.**

```
for (Direction d : Direction.asArray()){  
//  
}
```
- B.**

```
for (Direction d : Direction.asList()){  
//  
}
```
- C.**

```
for (Direction d : Direction.iterator()){  
//  
}
```
- D.**

```
for (Direction d : Direction.values()){  
//  
}
```

**Answer: D**

Explanation:

Explanation/Reference:

Explanation:

The static values() method of an enum type returns an array of the enum values. The foreach loop is a good

way to go over all of them.

```
//... Loop over all values.
```

```
for (Direction d : Direction.values()){  
System.out.println(d); // PrintsNORTH, EAST, ...  
}
```

**NEW QUESTION: 3**

You plan to deploy two new Microsoft Azure SQL Database instances. One instance will support a data entry application. The other instance will support the company's business intelligence efforts. The databases will be accessed by mobile

applications from public IP addresses.

You need to ensure that the database instances meet the following requirements:

- \* The database administration team must receive alerts for any suspicious activity in the data entry database, including potential SQL injection attacks.

- \* Executives around the world must have access to the business intelligence application.

- \* Sensitive data must never be transmitted. Sensitive data must not be stored in plain text in the database.

In the table below, identify the feature that you must implement for each database.

NOTE: Make only one selection in each column. Each correct selection is worth one point.

**Answer:**

Explanation:

Data entry: Threat Detection

SQL Threat Detection provides a new layer of security, which enables customers to detect and respond to potential threats as they occur by providing security alerts on anomalous activities. Users receive an alert upon suspicious database activities, potential vulnerabilities, and SQL injection attacks, as well as anomalous database access patterns.

Business intelligence: Dynamic Data Masking

Dynamic data masking limits (DDM) sensitive data exposure by masking it to non-privileged users. It can be used to greatly simplify the design and coding of security in your application.
