They are competent Oracle Procurement Cloud 2021 Implementation Essentials professionals.

NEW QUESTION: 1

Which two statements are true regarding Virtual SAN Fault Domains? (Choose two.)

- A.** They enable Virtual SAN to tolerate the failure of an entire physical rack.
- B.** They require VMware High Availability (HA) to ensure component distribution across domains.
- C.** Virtual SAN ensures that no two replicas are provisioned on the same domain.
- D.** Virtual SAN ensures that all replicas are provisioned on the same domain.

Answer: A,C

Explanation:

Explanation/Reference:

Explanation : Managing Fault Domains in Virtual SAN Clusters
If your Virtual SAN cluster spans across multiple racks or blade server chassis in a data center and you want to make sure that your hosts are protected against rack or chassis failure, you can create fault domains and add one or more hosts to each fault domain.

A fault domain consists of one or more Virtual SAN hosts grouped together according to their physical location in the

data center. When configured, fault domains enable Virtual SAN to tolerate failures of entire physical racks as well as failures of a single host, capacity device, network link or a network switch dedicated to a fault domain.
