E. Make the add, delete, and find, and update methods private for encapsulation.

F. Make the Customer class abstract.

Answer: B,C

Explanation:

C: The methods related directly to the entity Customer is moved to a new class.

D: Example (here Customer is the main entity):

```
public class Customer {
private final String id;
private String contactName;
private String phone;
public void setId(String id) { this.id = id; }
public String getId() { return this.id; }
public void setContactName(String cn) { this.contactName = cn; }
public String getContactName() { return this.contactName; }
public void setPhone(String phone) { this.phone = phone; }
public String getPhone() { return this.phone; }
}

public interface CustomerDAO {
public void addCustomer(Customer c) throws DataAccessException;
public Customer getCustomer(String id) throws
DataAccessException;
public List getCustomers() throws DataAccessException;
public void removeCustomer(String id) throws
DataAccessException;
public void modifyCustomer(Customer c) throws
DataAccessException;
}
```

Note: DAO Design Pattern

*Abstracts and encapsulates all access to a data source

*Manages the connection to the data source to obtain and store data

*Makes the code independent of the data sources and data vendors (e.g. plain-text, xml, LDAP, MySQL, Oracle, DB2)
