Which three components should you install? Each answer presents part of the solution.

- A. Microsoft Office 365 Integration Module for Windows Small Business Server 2011 Essentials
- B. Rights Management module for Windows PowerShell
- C. Microsoft .NET Framework 3.5
- D. Azure Active Directory module for Windows PowerShell
- E. Microsoft .NET Framework 4.0
- F. Microsoft Online Services Sign-in Assistant

Answer: C,D,F

Explanation:

You can use Windows PowerShell to administer Office 365 and Azure Active Directory.

However, the default installation of Windows PowerShell on

Windows Server 2012 (or any other version of Windows) does not include the PowerShell cmdlets required to manage Office 365 or Azure Active Directory.

You need to install the PowerShell module that includes the necessary cmdlets for managing Azure Active Directory. This module is the Windows Azure Active Directory Module for Windows PowerShell module. This module also requires that Microsoft .NET Framework

3.5 is installed and enabled.

Before the Windows Azure Active Directory Module for Windows PowerShell, can be installed, the Microsoft Online Services Sign-in Assistant must be installed. This will allow you to connect to your Office 365/Azure subscription from a PowerShell session on a remote computer.
