- A. The primary VLAN and hosts are able to reach community ports.
- B. The primary VLAN and hosts are able to communicate with hosts on other VLANs
- C. The primary VLAN and hosts are able to communicate with each other
- D. Hosts in the server farm are unable to communicate with each other.

Answer: C

NEW QUESTION: 4

John has performed a scan of the web server with NMAP but did not gather enough information to accurately identify which operating system is running on the remote host. How could you use a web server to help in identifying the OS that is being used?

- A. Telnet to port 8080 on the web server and look at the default page code
- B. Connect to the web server with a browser and look at the web page

- C. Telnet to an Open port and grab the banner
- D. Connect to the web server with an FTP client

Answer: C

Explanation:

Most Web servers politely identify themselves and the OS to anyone who asks.
