- A. False
- B. True

Answer: A

NEW QUESTION: 2

DRAG DROP

You create an HTML5 application that includes JavaScript. The application performs several AJAX requests. One AJAX request retrieves order information from a web service and then sends the information back to a webpage within the application. You must create a custom event. You have the following requirements:

The webpage must contain an HTML element named ordersListing that will

receive the custom event notification.

The event name must be ordersReceived.

The event must pass a custom value named orderCount.

The event must run a JavaScript method named showOrdersReceivedCount after

the orders Listing HTML element receives the event.

Do not allow other DOM elements to receive the event.

Allow the event to be cancelled.

Send the event into the event system.

You need to implement the custom event to notify specific DOM elements of the AJAX response.
