Based on the consideration that there are some hard-to-understand contents we insert the instances to our C\_SAC\_2107 test guide to concretely demonstrate the knowledge points and the diagrams to let the clients understand the inner relationship and structure of the C\_SAC\_2107 knowledge points.

**NEW QUESTION: 1**

Which is NOT a reason why it becomes more difficult to implement changes identified by a MoV Study as a project progresses?

- A. Resistance to change increases
- B. Project objectives are less clear
- C. Sunk costs increase as a project progresses
- D. Project team members gain increased ownership of their work

**Answer: B**

**NEW QUESTION: 2**

IBM

using a hardware Fibre Channel adapter.

Host1 contains two virtual machines named VM1 and VM2.

You need to provide VM1 with direct access to the SAN. VM2 must not require access to the SAN.

Which two configurations should you perform? (Each correct answer presents part of the solution. Choose two.)

- A. On Host1, configure a new virtual switch.
- B. On Host1, modify the Hyper-V settings.
- C. On Host1, configure a new Virtual Fibre Channel SAN.
- D. On VM1, add a network adapter.
- E. On VM1, configure a Fibre Channel adapter.

**Answer: C,E**

Explanation:

Explanation

Step 1:

D. Building a Virtual SAN

The process of setting up virtual Fibre Channel starts with building a virtual SAN. The easiest way to accomplish this is to open the Hyper-V Manager, right click on the listing for your Hyper-V server in the console tree, and then choose the Virtual SAN Manager command from the shortcut menu.

Step 2:

A. Once you have created a virtual SAN, the next step in the process is to link a virtual machine to the virtual SAN. To do so, right click on the virtual machine for which you want to provide Fibre Channel connectivity and select the Settings command from the resulting shortcut menu. Next, select the Add Hardware container, as shown in the figure above, and then select the Fibre Channel Adapter option from the list of available hardware. Etc.

Note:

\* Virtual Fibre Channel for Hyper-V (also referred to as Synthetic Fibre Channel) provides VM guest operating systems with direct access to a Fibre Channel SAN by using a standard World Wide Name (WWN) associated with a virtual machine.

#### **NEW QUESTION: 4**

Besides the CPU, which of the following components might have their own heatsink?

- A. Audio card
- B. Hard drive
- C. RAID controller
- D. Graphics card

**Answer: D**

Explanation:
