C. MustRunAsNonRoot
D. forbiddenRoot
Answer: C
Explanation:
Explanation
What is a Pod Security Policy?
A Pod Security Policy is a cluster-level resource that controls
security sensitive aspects of the pod specification. The
PodSecurityPolicy objects define a set of conditions that a pod
must run with in order to be accepted into the system, as well
as defaults for the related fields. They allow an administrator
to control the following:
Privilege Escalation
These options control the allowPrivilegeEscalation container
option. This bool directly controls whether the no_new_privs
flag gets set on the container process. This flag will prevent
setuid binaries from changing the effective user ID, and
prevent files from enabling extra capabilities (e.g. it will
prevent the use of the ping tool). This behavior is required to
effectively enforce MustRunAsNonRoot.
example:
Require the container to run without root privileges.

rule: 'MustRunAsNonRoot'
