Our 1Z0-1052-21 study guide will help you regain confidence.

NEW QUESTION: 1

A customer with an E870 recently acquired a small company with an x86 Linux server running a scripting Java application. They would like to run that application on their E870, but are concerned about the porting effort.

How should the salesperson respond?

A. POWER8 systems come with Nvidia coprocessors designed specifically to run most x86 Linux applications in their native modes.

B. Well-written Linux on x86 applications written in scripting Java or more interpretive languages will run as is, with no changes.

C. PowerKVM is an open-source virtualization solution designed

to run Linux-only applications written in C++ and Java applications from x86.

D. IBM Bluemix is a Platform as a Service (PaaS) offering that creates a hybrid OpenStack environment of AIX, IBM i and Linux.

Answer: C

NEW QUESTION: 2

Buffer X in an Accounting application module for Brownies Inc. can contain 200 characters. The programmer makes an assumption that 200 characters are more than enough. Because there were no proper boundary checks being conducted, Bob decided to insert 400 characters into the 200-character buffer. (Overflows the buffer). Below is the code snippet.

How can you protect/fix the problem of your application as shown above?

A. Because the counter starts with 0, we would stop when the counter is less than 200

B. Add a separate statement to signify that if we have written 200 characters to the buffer, the stack should stop because it can't hold any more data

C. Add a separate statement to signify that if we have written less than 200 characters to the buffer, the stack should stop because it can't hold any more data

D. Because the counter starts with 0, we would stop when the counter is more than 200

Answer: A,B

Explanation:

I=199 would be the character number 200. The stack holds exact 200 characters so there is no need to stop before 200.

NEW QUESTION: 3

A company recently experienced a data breach when an unauthorized user accessed the network. Which questions should the network architect ask to identify an affective access solution to prevent unauthorized access in the future? (Select two)

A. Does the company have an existing RADIUS server?

B. Does the company's firewall support access control lists (ACL)?

C. Does the company have the resources required to train users on remediation services?

D. Do users have legacy device that do not support 802.1X?

E. Do users devices support Secure Shell (SSH)?

Answer: A,D
