Deferred tax expense or income is the sum of the changes in the deferred tax assets and deferred tax liabilities. For example, this amount reflects changes relating to the origination or reversal of temporary differences, changes in tax rates and imposition of new taxes.

NEW QUESTION: 3

Which statement about Cisco Express Forwarding is true?

A. It makes forwarding decisions by a process that is scheduled through the IOS scheduler.

B. It uses a fast cache that is maintained in a router data plane.

C. It maintains two tables in the data plane: the FIB and adjacency table.

D. The CPU of a router becomes directly involved with packet-switching decisions.

Answer: C

Explanation:

Explanation

Cisco Express Forwarding (CEF) provides the ability to switch packets through a device in a very quick and efficient way while also keeping the load on the router's processor low. CEF is made up of two different main components: the Forwarding Information Base (FIB) and the Adjacency Table. These are automatically updated at the same time as the routing table. The Forwarding Information Base (FIB) contains destination reachability information as well as next hop information. This information is then used by the router to make forwarding decisions.

The FIB allows for very efficient and easy lookups. Below is an example of the FIB table:

The adjacency table is tasked with maintaining the layer 2 next-hop information for the FIB. An example of the adjacency table is shown below:

It uses a fast cache that is maintained in a router data plane. The fast cache is only used when fast switching is enabled while CEF is disabled.
