Within the last few decades, IT got a lot **New ISO-22301-Lead-Auditor Test Preparation** of publicity and it has been a necessary and desirable part of modern life.

NEW QUESTION: 1

- A. Enable-NetAdapterBinding
- B. Add - WindowsFeature
- C. Set-NetAdapterVmq
- D. Set-NetVirtualizationGlobal

Answer: A

Explanation:

Hyper-V Network Virtualization runs multiple virtual networks on a physical network. And each virtual network operates as if it is running as a physical network. The Set-NetAdaptercmdlet sets the basic properties of a network adapter such as virtual LAN (VLAN) identifier (ID) and MAC address. Thus if you add the binding parameter to the command then you will be able to install the Windows Network Virtualization Filter Driver. Step one: Enable Windows Network Virtualization (WNV). This is a binding that is applied to the NIC that your External Virtual Switch is bound to. This can be a physical NIC, it can be an LBFO NIC team. Either way, it is the network adapter that your External Virtual Switch uses to exit the server. This also means that if you have multiple virtual

networks or multiple interfaces that you can pick and choose and it is not some global setting. If you have one External Virtual Switch this is fairly easy: `$vSwitch = Get-VMSwitch -SwitchType External#` Check if Network Virtualization is bound# This could be done by checking for the binding and seeing if it is enabled `ForEach-Object -InputObject $vSwitch {if ((Get-NetAdapterBinding -ComponentID "ms_netwnv" -InterfaceDescription $_.NetAdapterInterfaceDescription).Enabled -eq $false){ # Lets enable it Enable-NetAdapterBinding -InterfaceDescription $_.NetAdapterInterfaceDescription -ComponentID "ms_netwnv"}}`

NEW QUESTION: 2

Which business object do you use to set up the details of the classification data that you want to download and configure how it is mapped from the content provider's data to the Global Trade Management (GTM) data structure?

A. External System

B. Data Load Type
