It is hard to find in the market.

NEW QUESTION: 1

A supervisor is reviewing the overall call statistics for the month to study the effectiveness of the voicemail system. Which report analyzes the percentage of total calls for which a caller left a message?

- A. Port Statistics
- B. System Usage
- C. Login Failures
- D. Basic Metrics

Answer: D

NEW QUESTION: 2

Your company has one office in New York and one office in Montreal. An Active Directory site exists for each office. The network consists of one Active directory domain. You create four organizational units (OUs) named NewYorkUsers, NewYorkComputers, MontrealUsers, and MontrealComputers. The offices collaborate on a company project. You create a group named Project that contains all user and computer accounts for employees working on the project. Project group

users from the New York office are currently working from the Montreal office and are using their portable computers. You plan to deploy a new application to the Project group. You need to prepare the environment for the deployment of the application. The solution must meet the following requirements:

- Only the Project group must have the application installed.
- Existing Group Policy objects (GPOs) settings applied to the Project group must remain unaffected.

What should you do?

- A.** Move all Project group computers in the NewYorkComputers OU to the MontrealComputers OU. Create a GPO. Link the GPO to the MontrealComputers OU to deploy the application.
- B.** Create a GPO. Link the GPO to the New York site. Filter the application of the GPO to only the Project group.
- C.** Create a GPO. Link the GPO to the Montreal site. Filter the application of the GPO to only the Project group.
- D.** Move all Project group computers in the MontrealComputers OU to the NewYorkComputers OU. Create a GPO. Link the GPO to the NewYorkComputers OU to deploy the application.

Answer: C

Explanation:

Explanation/Reference: To deploy a new application called Appl to only the JointProject group without affecting the existing Group Policy objects (GPOs) settings, you need to create a new GPO so that existing GPO settings are not affected and link a GPO to the branch office site. You need to then filter the application (Appl) of the GPO to only the JointProject group rather than move all JointProject group computers to different OUs because filtering allows you to target only specific computers or users. You can create and modify multiple preference items within each GPO, and filter each preference item to target only specific computers or users. You should create and link a GPO to the branch office site and not to the head office site because all the users of the JointProject group are working from the branch office site even if some of them belong to head office site.

- A.** Amazon SimpleDB

- B. Amazon ElastiCache
- C. Amazon DynamoDB
- D. Amazon ElastiCache

Answer: C

Explanation:

Explanation

Amazon DynamoDB is a fully managed NoSQL database service that provides fast and predictable performance with seamless scalability. You can use Amazon DynamoDB to create a database table that can store and retrieve any amount of data, and serve any level of request traffic. Amazon DynamoDB automatically spreads the data and traffic for the table over a sufficient number of servers to handle the request capacity specified by the customer and the amount of data stored, while maintaining consistent and fast performance.

NEW QUESTION: 4

A Dell EMC NetWorker backup administrator is configuring backups for a Microsoft Windows client with several large save sets. The administrator is considering using the parallel save streams feature.

What is a characteristic of the parallel save streams feature?

- A. Parallel save streams can be enabled on the backup action
- B. "Target sessions" on the client controls the number of save streams
- C. Synthetic full backups are supported for only Linux
- D. Save set entry on the client is specified at the file system level.

Answer: D
