From the exam materials you can tell if our exam [PMP-KR](#) materials are valid and suitable for you, You have power to download any time, If you have encountered some problems while using PMP-KR practice guide, you can also get our timely help as our service are working 24/7 online.

NEW QUESTION: 1

CyberArk creates exceptions for Data Execution Prevention (DEP) on selected executable files. This is done as part of installing which of the following components?

- A. CPM
- B. PSM
- C. PVWA
- D. AAM Credential Provider (previously known as AIM Credential Provider)

Answer: A

NEW QUESTION: 2

Your company deploys several Linux and Windows virtual machines (VMs) to Azure. The VMs are deployed with the Microsoft Dependency Agent and the Log Analytics Agent installed by using Azure VM extensions. On-premises connectivity has been enabled by using Azure ExpressRoute.

You need to design a solution to monitor the VMs.

Which Azure monitoring services should you use? To answer, select the appropriate Azure monitoring services in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: Azure Traffic Analytics

Traffic Analytics is a cloud-based solution that provides visibility into user and application activity in cloud networks. Traffic analytics analyzes Network Watcher network security group (NSG) flow logs to provide insights into traffic flow in your Azure cloud. With traffic analytics, you can: Identify security threats to, and secure your network, with information such as open-ports, applications attempting internet access, and virtual machines (VM) connecting to rogue networks.

Visualize network activity across your Azure subscriptions and identify hot spots.

Understand traffic flow patterns across Azure regions and the internet to optimize your network deployment for performance and capacity.

Pinpoint network misconfigurations leading to failed connections in your network.

Box 2: Azure Service Map

Service Map automatically discovers application components on Windows and Linux systems and maps the communication between services. With Service Map, you can view your servers in the way that you think of them: as interconnected systems that deliver critical services. Service Map shows connections between servers, processes, inbound and outbound connection latency, and ports across any TCP-connected architecture, with no configuration required other than the installation of an agent.

NEW QUESTION: 3

AWS CloudTrail logs API calls made to AWS services. A customer wants to ensure that all API calls made to AWS services are logged. The customer has a multi-account environment with several accounts. The customer wants to ensure that all API calls made to AWS services in all accounts are logged. Which of the following actions should the customer take to ensure that all API calls made to AWS services are logged?

A. Enable CloudTrail in the root account and use the root account's master key to encrypt the logs.

B. Enable CloudTrail in the root account and use the root account's master key to encrypt the logs. Enable CloudTrail in all other accounts and use the root account's master key to encrypt the logs.

C. Enable CloudTrail in the root account and use the root account's master key to encrypt the logs. Enable CloudTrail in all other accounts and use each account's master key to encrypt the logs.

D. Enable CloudTrail in the root account and use the root account's master key to encrypt the logs. Enable CloudTrail in all other accounts and use the root account's master key to encrypt the logs. Enable CloudTrail in all other accounts and use each account's master key to encrypt the logs.
