**E.** Use the storage client to download log data from \$logs/table

**Answer: A,D**

Explanation:

Explanation/Reference:

Explanation:

Storage Logging logs request data in a set of blobs in a blob container named \$logs in your storage account. This container does not show up if you list all the blob containers in your account but you can see its contents if you access it directly. To view and analyze your log data, you should download the blobs that contain the log data you are interested in to a local machine. Many storage-browsing tools enable you to download blobs from your storage account; you can also use the Azure Storage team provided command-line Azure Copy Tool (AzCopy) to download your log data.

Polling data comes from a variety of sources, including online surveys, house-to-house interviews, and booths at public events.

Polling data

Polling data is stored in one of the two locations:

An on-premises Microsoft SQL Server 2019 database named PollingData

Azure Data Lake Gen 2

Data in Data Lake is queried by using PolyBase

Poll metadata

Each poll has associated metadata with information about the poll including the date and number of respondents. The data is stored as JSON.

Phone-based polling

Security

Phone-based poll data must only be uploaded by authorized users from authorized devices

Contractors must not have access to any polling data other than their own

Access to polling data must set on a per-active directory user basis

Data migration and loading

All data migration processes must use Azure Data Factory

All data migrations must run automatically during non-business hours

Data migrations must be reliable and retry when needed

Performance

After six months, raw polling data should be moved to a lower-cost storage solution.

Deployments

All deployments must be performed by using Azure DevOps.

Deployments must use templates used in

multiple environments

No credentials or secrets should be used during deployments

Reliability

All services and processes must be resilient to a regional Azure outage.

Monitoring

All Azure services must be monitored by using Azure Monitor.

On-premises SQL Server performance must be monitored.
