NEW QUESTION: 1

DHCP snooping and IP Source Guard have been configured on a switch that connects to several client workstations.

The IP address of one of the workstations does not match any entries found in the DHCP binding database.

Which statement describes the outcome of this scenario?

- A.** Packets from the workstation will be rate limited according to the default values set on the switch.
- B.** The interface that is connected to the workstation in question will be put into the errdisabled state.
- C.** Traffic will pass accordingly after the new IP address is populated into the binding database.
- D.** The packets originating from the workstation are assumed to be spoofed and will be discarded.

Answer: D

Answer: A

Explanation:

Explanation/Reference:

Explanation:

Encryption is used to ensure the confidentiality of information. In this case you should make use of file level encryption. File level encryption is a form of disk encryption where individual files or directories are encrypted by the file system itself. This is in contrast to full disk encryption where the entire partition or disk, in which the file system resides, is encrypted.
