A Solutions Architect must design an Amazon DynamoDB table to store data about customer activities.

What is the MOST cost-efficient way to meet these requirements? (Choose two.)

- A. Export the old table data from DynamoDB to Amazon S3 using AWS Data Pipeline, and delete the old table.
- B. Use DynamoDB time-to-live settings to expire items after a certain time period.
- C. Create separate tables for each week's data with higher throughput for the current week.
- D. Provision a higher write capacity unit to minimize the number of partitions.
- E. Pre-process data to consolidate multiple records to minimize write operations.
