D. The IP address may be attached to one of the instances
Answer: A
Explanation:
A Virtual Private Cloud (VPC. is a virtual network dedicated to the user's AWS account.
A user can create a subnet with VPC and launch instances inside that subnet. When the user is launching an instance he needs toselect an option which attaches a public IP to the instance.
If the user has not selected the option to attach the public IP then it will only have a private IP when launched.
