NEW QUESTION: 3

You are planning on hosting a web application on AWS. You create an EC2 Instance in a public subnet. This instance needs to connect to an EC2 Instance that will host an Oracle database. Which of the following steps should be followed to ensure a secure setup is in place? Select 2 answers.

Please select:

- A. Place the EC2 Instance with the Oracle database in the same

public subnet as the Web server for faster communication

B. Create a database security group and ensure the web security group to allowed incoming access

C. Place the EC2 Instance with the Oracle database in a separate private subnet

D. Ensure the database security group allows incoming traffic from 0.0.0.0/0 The best secure option is to place the database in a private subnet. The below diagram from the AWS Documentation shows this setup. Also ensure that access is not allowed from all sources but just from the web servers.

Answer: B,C

Explanation:

Option A is invalid because databases should not be placed in the public subnet Option D is invalid because the database security group should not allow traffic from the internet For more information on this type of setup, please refer to the below URL:
