**NEW QUESTION: 2**

**Answer:**

Explanation:

Explanation

Box 1: Unattend.xml

In preparation to deploy shielded VMs, you may need to create an operating system specialization answer file.

On Windows, this is commonly known as the "unattend.xml" file. The New-ShieldingDataAnswerFile Windows PowerShell function helps you do this. Starting with Windows Server version 1709, you can run certain Linux guest OSes in shielded VMs. If you are using the System Center Virtual Machine Manager Linux agent to specialize those VMs, the New-ShieldingDataAnswerFile cmdlet can create compatible answer files for it.

Box 2: The Azure Portal

You can use the Azure portal to deploy a Linux virtual machine (VM) in Azure that runs Ubuntu.

### **NEW QUESTION: 3**

What configuration allows AnyConnect to automatically establish a VPN session when a user logs in to the computer?

- A. transparent mode
- B. always-on
- C. proxy
- D. Trusted Network Detection

**Answer: B**

Explanation:

Explanation/Reference:

Explanation:

You can configure AnyConnect to establish a VPN session automatically after the user logs in to a computer. The VPN session remains open until the user logs out of the computer, or the session timer or idle session timer expires. The group policy assigned to the session specifies these timer values. If AnyConnect loses the connection with the ASA, the ASA and the client retain the resources assigned to the session until one of these timers expire. AnyConnect continually attempts to reestablish the connection to reactivate the session if it is still open; otherwise, it continually attempts to establish a new VPN session.
