Answer: A

NEW QUESTION: 2

Which of the following would BEST detect logic bombs in new programs?

- A. Regression testing
- B. Final acceptance testing by users
- C. Independent program review
- D. Parallel/pilot testing

Answer: C

NEW QUESTION: 3

Ann wants to send a file to Joe using PKI. Which of the following should Ann use in order to sign the file?

- A. Ann's private key
- B. Joe's private key
- C. Joe's public key
- D. Ann's public key

Answer: A

Explanation:

The sender uses his private key, in this case Ann's private key, to create a digital signature. The message is, in effect, signed with the private key. The sender then sends the message to the receiver. The receiver uses the public key attached to the message to validate the digital signature. If the values match, the receiver knows the message is authentic.

The receiver uses a key provided by the sender-the public key-to decrypt the message.

Most digital signature implementations also use a hash to verify that the message has not been altered, intentionally or accidentally, in transit.

Incorrect Answers:

- A. The sender's (Ann's) not Joe's key must be used.
- B. The sender's (Ann's) not Joe's key must be used.
- C. The sender's private key, not her public key, is used to sign the message file.
