Fast delivery after payment.

NEW QUESTION: 1

You must architect the migration of a web application to AWS. The application consists of Linux web servers running a custom web server. You are required to save the logs generated from the application to a durable location.

What options could you select to migrate the application to AWS? (Choose 2)

A. Use VM import/Export to import a virtual machine image of the server into AWS as an AMI. Create an Amazon Elastic Compute Cloud (EC2) instance from AMI, and install and configure the Amazon CloudWatch Logs agent. Create a new AMI from the instance. Create an AWS Elastic Beanstalk application using the AMI platform and the new AMI.

B. Create Dockerfile for the application. Create an AWS OpsWorks stack consisting of a Docker layer that uses the Dockerfile. Create custom recipes to install and configure Amazon Kinesis to publish the logs into Amazon CloudWatch.

C. Create a Dockerfile for the application. Create an AWS Elastic Beanstalk application using the Docker platform and the Dockerfile. Enable logging the Docker configuration to automatically publish the application logs. Enable log file rotation to Amazon S3.

D. Create Dockerfile for the application. Create an AWS OpsWorks stack consisting of a custom layer. Create custom recipes to install Docker and to deploy your Docker container using the Dockerfile.

Create customer recipes to install and configure the application to publish the logs to Amazon CloudWatch Logs.

E. Create an AWS Elastic Beanstalk application using the custom web server platform. Specify the web server executable and the application project and source files. Enable log file rotation to Amazon Simple Storage Service (S3).

Answer: C,E

NEW QUESTION: 2

Refer to the exhibit. What is the meaning of the given error message ?

- A.** The pre-shared keys are mismatched
- B.** Ike is disable on the remote peer
- C.** The mirrored crypto ACLs are mismatched
- D.** The PFS group are mismatched

Answer: A

NEW QUESTION: 3

Which CLI command displays the IP configuration of each Data Mover?

- A.** server_devconfig
- B.** server_ifconfig
- C.** /sbin/ifconfig
- D.** server_sysconfig

Answer: B

Explanation:

Explanation/Reference:

Explanation:

To display the IP configuration from the Top Navigation Bar click Settings > Network > Settings for File > Interfaces

Note. When deleting or modifying an IP configuration for an interface, remember to update the appropriate CIFS servers that may be using that interface and any NFS exports that may depend on the changed interface.

To display the IP configuration using CLI you can use the server_ifconfig command.

Example:

```
$ server_ifconfig server_2 -all
```
