professional experts to preside over the contents of the test in so many years.

In addition, the PDF version also has many other special functions.

**NEW QUESTION: 1**

Which of the following is the most common bring your own device (BYOD) design model?

- A. Single SSID
- B. Protected SSID
- C. Guest SSID
- D. Dual SSID

**Answer: D**

Explanation:

The dual SSID design model is the most common bring your own device (BYOD) design model.

The dual SSID model separates provisioning and network access. With this model, there is also a protected SSID for employees and an open SSID for guests.

The single SSID bring your own device (BYOD) design model is less common than that of the dual SSID model. The single SSID BYOD design model provides provisioning and network access on a single secured SSID. This model does not work for guests.

Guest Enabled SSID is not a valid bring your own device (BYOD) design model. The only legitimate models are Single and Dual SSID.

Mixed Mode SSID is not a valid bring your own device (BYOD) design model. The only legitimate models are Single and Dual SSID.

**NEW QUESTION: 2**

The ISIS protocol is deployed in an IPv6 environment. The correct statement in the following is:

- A. In broadcast networks, the DIS priorities of IPv4 and IPv6 can be set separately.
- B. Configure ISIS silent on the ISIS interface, then this interface will not send ISIS packets, but will receive ISIS packets.
- C. By default, the DIS priority of the broadcast network interface on Level-1 and Level-2 is 1.
- D. In the same broadcast network, if each router supports both IPv4 and IPv6, the DIS of IPv4 and IPv6 must be the same device.

**Answer: D**

**NEW QUESTION: 3**

One of your customers plans on providing wireless coverage to a warehouse facility. After performing an initial walkthrough, you collect the following information:

The central part of the warehouse is between 400 and 600 feet (122 to 183 meters) from the

warehouse switches mounted on the walls.

The warehouse storage is composed of metallic racks with varying inventory levels and contents, from

electronics and plastic toys to food pallets and juice bottles. Workers need basic data coverage from their working location, and are not highly mobile. They usually

work from one single aisle, and their laptop is on a cart with wheels.

What would be your one recommendation to provide coverage to the central area of the warehouse?

**A.** In this case, extend the cable length just beyond 328 feet (100 m) and position APs as close as possible to the central area of the warehouse.

**B.** Position APs along the walls, and equip the APs with Yagi antennas to cover the central area.

**C.** Equip workers laptops with a directional antenna and install APs less than 328 feet (100m) away from the switch.

**D.** Install APs for client access in the central area and use a mesh backhaul link to connect to the DS.

**Answer: D**

#### **NEW QUESTION: 4**

You are a security officer of a company. You had an alert from IDS that indicates that one PC on your Intranet is connected to a blacklisted IP address (C2 Server) on the Internet. The IP address was blacklisted just before the alert. You are starting an investigation to roughly analyze the severity of the situation. Which of the following is appropriate to analyze?

**A.** IDS log

**B.** Internet Firewall/Proxy log.

**C.** Event logs on the PC

**D.** Event logs on domain controller

**Answer: B**
