**NEW QUESTION: 2**

Machine Learning Specialist is training a model to identify the make and model of vehicles in images. The Specialist wants to use transfer learning and an existing model trained on images of general objects. The Specialist collated a large custom dataset of pictures containing different vehicle makes and models.

What should the Specialist do to initialize the model to re-train it with the custom data?

A. Initialize the model with pre-trained weights in all layers and replace the last fully connected layer.

B. Initialize the model with pre-trained weights in all layers including the last fully connected layer.

C. Initialize the model with random weights in all layers and replace the last fully connected layer.

D. Initialize the model with random weights in all layers including the last fully connected layer.

**Answer: A**

**NEW QUESTION: 3**

A. Option C

B. Option B

C. Option D

D. Option A

**Answer: B**

Explanation:

Explanation

The AWS documentation mentions the following on Lifecycle policies

Lifecycle configuration enables you to specify the lifecycle

management of objects in a bucket. The configuration is a set of one or more rules, where each rule defines an action for Amazon S3 to apply to a group of objects. These actions can be classified as follows:

Transition actions - In which you define when objects transition to another storage class. For example, you may choose to transition objects to the STANDARD\_IA (IA, for infrequent access) storage class 30 days after creation, or archive objects to the GLACIER storage class one year after creation.

Expiration actions - In which you specify when the objects expire. Then Amazon S3 deletes the expired objects on your behalf. For more information on S3 Lifecycle policies, please visit the below URL
