NEW QUESTION: 3
Your network contains an Active Directory domain named
contoso.com. The domain contains a server named Server3 that
runs Windows Server 2012 R2 and has the DHCP Server server role
installed.
DHCP is configured as shown in the exhibit. (Click the Exhibit
button.)

Scope1, Scope2, and Scope3 are configured to assign the IP
addresses of two DNS servers to DHCP clients.
The remaining scopes are NOT configured to assign IP addresses

of DNS servers to DHCP clients.
You need to ensure that only Scope1, Scope3, and Scopes assign
the IP addresses of the DNS servers to the DHCP clients. The
solution must minimize administrative effort.
What should you do?
A. Create a superscope and scope-level policies.
B. Create a superscope and a filter.
C. Configure the Server Options.
D. Configure the Scope Options.
Answer: D
Explanation:
Explanation
Scope options are applied to any clients that obtain a lease
within that particular scope. Active scope option types always
apply to all computers obtaining a lease in a given scope
unless they are overridden by class or reserved client settings
for the option type.
Incorrect:
Not A, not B. A superscope allows a DHCP server to provide
leases from more than one scope to clients on a single physical
network. It is not applicable here.
Not C. If we configure the Server Options and set the DNS
Servers then all DHCP clients would be assigned a DNS server.
