Answer: A,B

NEW QUESTION: 2
Mit welcher Risikomanagementstrategie soll die mit einem bestimmten Aufwärtsrisiko verbundene Unsicherheit beseitigt

werden, indem sichergestellt wird, dass die Chance genutzt wird?
A. Akzeptieren
B. Teilen
C. Ausnutzen
D. Verbessern
Answer: C

NEW QUESTION: 3
What does a nonzero forwarding address indicate in a type-5 LSA?
A. It indicates that this router should have an OSPF neighbor relationship with the forwarding address before using this link-state ID.
B. It indicates that this link-state ID is eligible for ECMP.
C. It indicates that traffic can be directly routed to this next hop in shared segment scenarios where the external route source is directly connected.
D. It indicates that the receiving router must check that the next hop is reachable in its routing table before using this link-state ID.
Answer: C
Explanation:
Explanation/Reference:
Explanation:
The value of the forwarding address specified by the autonomous system boundary router (ASBR) can be either 0.0.0.0 or non-zero. The 0.0.0.0 address indicates that the originating router (the ASBR) is the next hop. The forwarding address is determined by these conditions:
ASBR's next hop interface address falls under the network range specified in the router ospf command Reference:
http://www.cisco.com/c/en/us/support/docs/ip/open-shortest-path-first-ospf/13682-10.html

NEW QUESTION: 4

A. Session state
B. Application state
C. Database support
D. Profile properties
Answer: B,C
Explanation:
Explanation
A: SQL Database provides a relational database management system for Windows Azure and is based on SQL Server technology. With a SQL Database instance, you can easily provision and deploy relational database solutions to the cloud, and take advantage of a distributed data center that provides

enterprise-class availability, scalability, and security with
the benefits of built-in data protection and self-healing.
D: Application state is a data repository available to all
classes in an ASP.NET application. Application state is stored
in memory on the server and is faster than storing and
retrieving information in a database. Unlike session state,
which is specific to a single user session, application state
applies to all users and sessions.
Therefore, application state is a useful place to store small
amounts of often-used data that does not change from one user
to another.
