I believe you will be very satisfied with our products.

NEW QUESTION: 1

The number of calls waiting in a Cisco Unified Communications Manager native call queue has reached its maximum limit. Which statement about what happens to additional incoming calls is true?

- A. Calls are handled according to the Hunt Options settings on the Line Group Configuration page.
- B. Calls are handled according to the Forward Hunt No Answer settings on the Hunt Pilot configuration page.
- C. Calls are handled according to the Forward Hunt Busy settings on the Hunt Pilot configuration page.

D. Calls are handled according to the When Queue Is Full settings on the Hunt Pilot Configuration page.

E. Calls are handled according to the Forward Hunt Busy settings on the Line Group members.

Answer: D

Explanation:

There are three main scenarios where alternate numbers are used:

When queue is full

Call Queuing allows up to 100 callers to be queued per hunt pilot (the maximum number of callers allowed in queue on a hunt pilot page). Once this limit for new callers been reached on a particular hunt pilot, subsequent calls can be routed to an alternate number. This alternate number can be configured through the Hunt Pilot configuration page (through the "Destination When Queue is Full" settings). When maximum wait time is met

Each caller can be queued for up to 3600 seconds per hunt pilot (the maximum wait time in queue). Once this limit is reached, that caller is routed to an alternate number. This alternate number can be configured through the Hunt Pilot configuration page (through the "Maximum wait time in queue" settings).

When no hunt members are logged in or registered

In a scenario where none of the members of the hunt pilot are available or registered at the time of the call, hunt pilot configuration provides an alternate number field (through the "When no hunt members are logged in or registered" settings) where calls can be routed. For Call Queuing, a hunt pilot member is considered available if that member has both deactivated do not disturb (DND) and logged into the hunt group. In all other cases, the line member is considered unavailable or logged off.

Answer: D

NEW QUESTION: 3

Sie erstellen ein Nano Server-Image für die Bereitstellung von 10 Servern.

Sie müssen die Server als geschützte Hosts konfigurieren, die eine TPM-Bestätigung (Trusted Platform Module) verwenden.

Welche drei Pakete sollten Sie in das Nano Server-Image aufnehmen? Jede richtige Antwort ist Teil der Lösung.

- A. Microsoft-NanoServer-Storage-Package
- B. Microsoft-NanoServer-Compute-Package
- C. Microsoft-NanoServer-ShieldedVM-Paket
- D. Microsoft-NanoServer-SCVMM-Paket
- E. Microsoft-NanoServer-SecureStartup-Package
- F. Microsoft-NanoServer-SCVMM-Compute-Package

Answer: B, C, E

Explanation:

Erläuterung

<https://docs.microsoft.com/en-us/system-center/vmm/guarded-deploy-host?toc=/windows-server/virtualization/toc.json> für einen Fall mit SCVMM Managed Nano Server Hyper-V: Wenn Sie auf dem Host, auf dem Nano Server Hyper-V ausgeführt wird, sollten die Pakete Compute, SCVMM-Package, SCVMMCompute, SecureStartup und ShieldedVM installiert sein.

<http://docs.microsoft.com/en-us/windows-server/get-started/deploy-nano-server> für einen eigenständigen Nano Server Hyper-V-Host sind keine SCVMM-bezogenen Pakete erforderlich, nur Compute-, SecureStartup- und ShieldedVM-Pakete. In dieser Tabelle sind die Rollen und Funktionen aufgeführt, die in

dieser Version von Nano Server verfügbar sind mit den Windows PowerShell-Optionen, mit denen die Pakete für sie installiert werden. Einige Pakete werden direkt mit ihren eigenen Windows PowerShell-Schaltern installiert (z. B. -Berechnen); andere installieren Sie, indem Sie die Paketnamen an den Parameter -Package übergeben, den Sie in einer durch Kommas getrennten Liste zusammenfassen können. Mit dem Cmdlet Get-NanoServerPackage können Sie verfügbare Pakete dynamisch auflisten.
