- E. There in an MPLS network that in running 6VPE, and the ingrenn PE router han no mpln ip propagate-ttl.

**Answer: B**

## Explanation:

The second hop shown and IPV6 address over MPLS, so we know that there is an MPLS network running 6PE or 6VPE. And because the second and third hops show up in the traceroute. Then TTL is being propagated because if the "no ip propagate-ttl" command was used these devices would be hidden in the traceroute.
