NEW QUESTION: 1

A service provider is installing a Unity storage system for an end-user. The end-user is concerned about network security and will not allow the service provider access to the network. How can the service provider set a static IP address for the Unity storage system management interface?

- A. Use the Connection Utility to create a configuration file
- B. Connect directly to the service ports and configure the networking through UEMCLI
- C. Use the embedded InitCLI tool
- D. Use an IPMI serial over LAN connection

Answer: B

Explanation:

The `svc_initial_config UEMCLI` command sets up initial system configuration. It configures a management IP address when the Connection Utility (CU) is not available on the network. If an address is set, this command can also change the management IPv4 and IPv6 configuration mode. It attempts to configure the system with the given friendly name and/or network parameters. Note: The Unisphere CLI (UEMCLI) is a tool that provides us with the CLI access to perform the same actions as one would on the Unisphere web interface.

NEW QUESTION: 2

Which statement about IS-IS adjacencies is true?

- A. Adjacency formation between Level 2 routers must have the same area ID.
- B. Adjacency formation between Level 1 routers must have the same area ID.
- C. Adjacency formation between Level 2 routers must have different area IDs.
- D. Adjacency formation between Level 1 routers must have different area IDs.

Answer: B

Explanation:

Explanation

IS-IS hello PDUs establish adjacencies with other routers and have three different formats: one for point-to-point hello packets, one for Level 1 broadcast links, and one for Level 2 broadcast links. Level 1 routers must share the same area address to form an adjacency, while Level 2 routers do not have this limitation.
