#### **NEW QUESTION: 1**

Refer to the exhibit.

You have configured two SSL VPN Certificate to Connection Profile Maps for all employee and management users. The Connection Profiles for the management users are not being applied when the "management" users connect.

Based on the configuration that is shown, what is the most likely cause of this issue?

**A.** The rule priority of the employee mapping is not low enough, and it needs to be lowered to 1.

**B.** The priority of the management mapping is too high, and it

needs to be lower than the rule priority of the employee mapping.

**C.** The priority of the employee mapping is too low, and it needs to be increased, but not higher than the rule priority of the management mapping.

**D.** The matching criteria for the management mapping is too specific, and the CN matching parameter should be removed.

**Answer: B**

Explanation:

ASDM user guide p[age 35 52

Use the Add/Edit Certificate Matching Rule dialog box to assign the name of a list (map) to a connection profile. Fields \* Map-Choose one of the following: - Existing-Select the name of the map to include the rule. - New-Enter a new map name for a rule. \* Rule Priority-Type a decimal to specify the sequence with which the security appliance evaluates the map when it receives a connection request. For the first rule defined, the default priority is 10. The security appliance evaluates each connection against the map with the lowest priority number first. \* Mapped to Connection Profile-Select the connection profile, formerly called a "tunnel group," to map to this rule. If you do not assign a rule criterion to the map, as described in the next section, the security appliance ignores the map entry.

### **NEW QUESTION: 2**

Which feature adds elasticity to Amazon EC2 instances to handle the changing demand for workloads?

**A.** Amazon EC2 Auto Scaling

**B.** Lifecycle policies

**C.** Application Load Balancer

**D.** Resource groups

**Answer: A**

Explanation:

Support for monitoring the health of each service independently, as health checks are defined at the target group level and many CloudWatch metrics are reported at the target group level. Attaching a target group to an Auto Scaling group enables you to scale each service dynamically based on demand.
