It is enough to wipe out your doubts now, As indicator on your way to success, our C\_ARP2P\_2108 practice materials can navigate you through all difficulties in your journey.

**NEW QUESTION: 1**

A manufacturer uses standard costing, and a potential supplier uses activity-based costing. This difference most likely will have implications for which of the following types of future decisions?

- A. Freight terms
- B. Price concessions
- C. Make-or-buy
- D. Distribution warehouse locations

**Answer: C**

**NEW QUESTION: 2**

what tuning/configuration changes can only be done before a queue manager is defined?

- A. Allocation of the Log primary files
- B. Specification of queue buffer sizes for non-persistent messages
- C. Allocation of specific disks for the queue manager N.e and Log data
- D. Specification of NPMSPEED

**Answer: C**

**NEW QUESTION: 3**

You have a server named Server1 that runs Windows Server 2012. You have a 3-TB database that will be moved to Server1. Server1 has the following physical disks:  
Three 2-TB SATA disks that are attached to a single IDE controller  
One 1-TB SATA disk that is attached to a single IDE controller

You need to recommend a solution to ensure that the database can be moved to Server1. The solution must ensure that the database is available if a single disk fails.

What should you include in the recommendation?

- A. Add each disk to a separate storage pool. Create a mirrored virtual disk.
- B. Add all of the disks to a single storage pool, and then create a parity virtual disk.
- C. Add two disks to a storage pool. Add the other disk to another storage pool. Create a mirrored virtual disk.
- D. Add all of the disks to a single storage pool, and then create two simple virtual disks.

**Answer: B**

Explanation:

Explanation/Reference:

Explanation:

A parity virtual disk is similar to a hardware Redundant Array of Inexpensive Disks (RAID5). Data, along with parity information, is striped across multiple physical disks. Parity enables Storage Spaces to continue to service read and write requests even when a drive has failed. A minimum of three physical disks is required for a parity virtual disk. Note that a parity disk cannot be used in a failover cluster.
