## NEW QUESTION: 2

Amazon EC2 instances in a VPC access an Amazon EFS file system. The VPC has three Availability Zones, and each has one mount target created in it. The VPC has two subnets in one of the Availability Zones. However, a mount target is created in only one of the subnets. How does this configuration affect the availability of the file system?

A. The file system is available only to instances in the Availability Zone with the mount target.

B. The file system is available to instances in all Availability Zones, but only to instances in the subnets with the mount target.

C. The file system is available to instances in all Availability Zones, but only to instances in the Availability Zone with the mount target.

D. The file system is available to instances in all Availability Zones, but only to instances in the subnets with the mount target.

Answer: B

Explanation:

Explanation

How Amazon EFS Works with Amazon EC2

The following illustration shows an example VPC accessing an Amazon EFS file system. Here, EC2 instances in the VPC have file systems mounted.

In this illustration, the VPC has three Availability Zones, and each has one mount target created in it. We recommend that you access the file system from a mount target within the same Availability Zone. One of the Availability Zones has two subnets. However, a mount target is created in only one of the subnets.

Benefits of Auto Scaling

Better fault tolerance. Amazon EC2 Auto Scaling can detect when an instance is unhealthy, terminate it, and launch an instance

to replace it. You can also configure Amazon EC2 Auto Scaling to use multiple Availability Zones. If one Availability Zone becomes unavailable, Amazon EC2 Auto Scaling can launch instances in another one to compensate.

Better availability. Amazon EC2 Auto Scaling helps ensure that your application always has the right amount of capacity to handle the current traffic demand.

Better cost management. Amazon EC2 Auto Scaling can dynamically increase and decrease capacity as needed. Because you pay for the EC2 instances you use, you save money by launching instances when they are needed and terminating them when they aren't.

### **NEW QUESTION: 3**

Which statement about Service Advertisement Framework is true?

- A.** SAF operates on any dynamic or static IP routing configuration. SAF is totally independent of the underlying routing protocol.
- B.** SAF has no dependency on the underlying routing protocol, as long as it is a dynamic routing protocol. Static routes are not supported.
- C.** SAF requires that the EIGRP be configured only on SAF routers. Non-SAF routers act as an IP cloud.
- D.** SAF requires that the EIGRP be configured on all routers, including non-SAF routers.

#### **Answer: A**

Explanation:

Because Cisco SAF is independent of IP routing and uses underlying Cisco routing technology to distribute service advertisements in a reliable and efficient manner, Cisco SAF will run in networks over any routing protocol they may have in place such as Enhanced Interior Gateway Routing Protocol (EIGRP), Open Shortest Path First (OSPF), Exterior Border Gateway Protocol (EBGP) over an MPLS service, or static routing (Figure 2).
