- B.

- D.  
interface Ethernet1/23  
channel-protocol etherchannel 30  
channel-group 10 mode desirable

**Answer: D**

Explanation:

An etherchannel will form if one end is active and the other is passive.

Load balancing can only be configured globally.

As a result, all channels (manually configured, PagP, or LACP) use the same load-balancing.

This is true for the switch globally, although each switch involved in the etherchannel can have non matching parameters for load balancing.
