NEW QUESTION: 1
Which of the following backup methods is most appropriate for off-site archiving?
A. Differential backup method
B. Incremental backup method
C. Off-site backup method
D. Full backup method
Answer: D
Explanation:

The full backup makes a complete backup of every file on the system every time it is run. Since a single backup set is needed to perform a full restore, it is appropriate for off-site archiving. NEW QUESTION: 2
You deploy an Active Directory domain named contoso.com to the network. The domain is configured as an Active Directory-integrated zone. All domain controllers run Windows Server 2012 and are DNS servers.
You plan to deploy a child domain named operations.contoso.com.
You need to recommend changes to the DNS infrastructure to ensure that users in the operations department can access the servers in the contoso.com domain.
What should you include in the recommendation?
A. A zone delegation for _msdcs.contoso.com
B. Changes to the replication scope of contoso.com
C. Changes to the replication scope of operations.contoso.com
D. Changes to the replication scope of _msdcs.contoso.com
Answer: B
Explanation:
The contoso.com resources must be available from the subdomain operations.contoso.com. The contoso.com replication scope must include operations.contoso.com.
Incorrect:
Not A: Zone delegation relates to which users can handle the administration of a subdomain, but the question is related to access of servers not of administration of a DNS zone.
Note: Zone delegation is transferring authority for a subdomain to a new zone. Typically, you use zone delegation when a business unit in an organization is large enough to warrant its own subdomain and has the personnel to manage its own DNS server for the subdomain.
Not C: Every Windows domain zone has an _mcdcs subdomain, which holds all the SRV records for Microsoft-hosted services, such as the global catalog, LDAP, and Kerberos.
