**Answer: D**

**NEW QUESTION: 2**

Which features of IBM WebSphere MQ specifically provide robust message transport?

- A. Asynchronous delivery, once and once-only delivery, persistent messaging
- B. Time independence, no duplicate delivery, synchronous processing
- C. Data integrity, security, parallel processing
- D. Assured delivery, application parallelism, time dependent applications

**Answer: A**

**NEW QUESTION: 3**

RBAC is a security model that is used to control access to resources in a system. In the context of Kubernetes, RBAC is used to control access to the API server. Which of the following is a valid RBAC role in a Kubernetes cluster?

ServiceAccount is a Kubernetes resource that represents an identity in the cluster. It is used to authenticate and authorize users and processes. The following are valid RBAC roles in a Kubernetes cluster:

- cluster-admin
- admin
- view
- edit
- system:authenticated
- system:anonymous
- system:unauthenticated

**Answer:**

Explanation:

Explanation

Step 1: Kubectl create

You can add a service account to Tiller using the `--service-account <NAME>` flag while you're configuring Helm (step 2 below). As a prerequisite, you'll have to create a role binding which specifies a role and a service account name that have been set up in advance.

Example: Service account with cluster-admin role

```
$ kubectl create -f rbac-config.yaml
serviceaccount "tiller" created
clusterrolebinding "tiller" created
$ helm init --service-account tiller
```

Step 2: helm init

To deploy a basic Tiller into an AKS cluster, use the `helm init` command.

Step 3: helm install

To install charts with Helm, use the `helm install` command and specify the name of the chart to install.
