Answer: B
Explanation:
Explanation
There are several benefits to using for
authorization operations. First, performance is improved by
running the authorization function using
closest to the viewer, reducing latency and response time to
the viewer request. The load on your origin servers is also
reduced by offloading CPU-intensive operations such as
verification of JSON Web Token (JWT) signatures. Finally, there
are security benefits such as filtering out unauthorized
requests before they reach your origin infrastructure.
