A. HTML files in a directory structure.

B. HTML files in a flat file structure.

C. JSON files in a directory structure.

D. XML files in a flat file structure.

**Answer: C**

**NEW QUESTION: 4**

For a FX forward contract, what would be the worst time for a counterparty to default (in terms of the maximum likely credit exposure)?

A. Right after inception

B. At maturity

C. Indeterminate from the given information

D. Roughly three-quarters of the way towards maturity

**Answer: B**

Explanation:

Explanation

With the passage of time, the range of possible values the FX contract can take increases. Therefore the maximum value of the contract, which is when the credit risk would be maximum, would be at maturity. (Note that this is different than an interest rate swap whose value at maturity approaches zero.) Therefore Choice 'a' is the correct answer and the others are incorrect.
