ãã•Æã•, ã, Šã•¾ã•™ã€,

**Answer :**

Explanation:

Explanation

Backup and Restore: Azure Backup

Scenario: The VM is critical and has not been backed up in the past. The VM must enable a quick restore from a 7-day snapshot to include in-place restore of disks in case of failure.

In-Place restore of disks in IaaS VMs is a feature of Azure Backup.

Performance: Accelerated Networking

Scenario: The VM shows high network latency, jitter, and high CPU utilization.

Accelerated networking enables single root I/O virtualization (SR-IOV) to a VM, greatly improving its networking performance. This high-performance path bypasses the host from the datapath, reducing latency, jitter, and CPU utilization, for use with the most demanding network workloads on supported VM types.

**NEW QUESTION: 2**

You deploy a Microsoft Azure SQL Data Warehouse instance. The instance must be available eight hours each day.

You need to pause Azure resources when they are not in use to reduce costs.

What will be the impact of pausing resources? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer :**

Explanation:

Explanation

To save costs, you can pause and resume compute resources on-demand. For example, if you won't be using the database during the night and on weekends, you can pause it during those times, and resume it during the day. You won't be charged for DWUs while the database is paused.

When you pause a database:

Compute and memory resources are returned to the pool of available resources in the data center Data Warehouse Unit (DWU) costs are zero for the duration of the pause.

Data storage is not affected and your data stays intact.

SQL Data Warehouse cancels all running or queued operations.

When you resume a database:

SQL Data Warehouse acquires compute and memory resources for your DWU setting.

Compute charges for your DWUs resume.

Your data will be available.

You will need to restart your workload queries.

### **NEW QUESTION: 3**

Der Projektsponsor fordert unangemessen Statusberichte von einzelnen Teammitgliedern an. Der Projektmanager plant, sich mit dem Sponsor zu treffen, um das Problem zu besprechen.

Worauf sollte sich der Projektmanager vor dem Treffen beziehen?

- A. Risikomanagementplan
- B. Arbeitsleistungsberichte
- C. Kommunikationsmanagementplan
- D. Projektcharta

**Answer: C**

### **NEW QUESTION: 4**

Sara, an application developer, implemented error and exception handling alongside input validation. Which of the following does this help prevent?

- A. Buffer overflow
- B. Fuzzing
- C. Pop-up blockers
- D. Cross-site scripting

**Answer: A**

Explanation:

Buffer overflow is an exploit at programming error, bugs and flaws. It occurs when an application is fed more input data than it is programmed to handle. This may cause the application to terminate or to write data beyond the end of the allocated space in memory. The termination of the application may cause the system to send the data with temporary access to privileged levels in the system, while overwriting can cause important data to be lost. Proper error and exception handling and input validation will help prevent Buffer overflow exploits.
