NEW QUESTION: 1

On an MPLS L3VPN, which two tasks are performed by the PE router? (Choose two.)

- A. It exchanges VPNv4 routes with other PE routers.
- B. It distributes labels and forwards labeled packets.
- C. It exchanges VPNv4 routes with CE devices.
- D. It typically exchanges iBGP routing updates with the CE device.
- E. It forwards labeled packets between CE devices.

Answer: A,B

Explanation:

MPLS VPN functionality is enabled at the edge of an MPLS network. The PE router performs these tasks:

Exchanges routing updates with the CE router

Translates the CE routing information into VPN version 4 (VPNv4) routes

Exchanges VPNv4 routes with other PE routers through the Multiprotocol Border Gateway Protocol (MP-BGP) A PE router binds a label to each customer prefix learned from a CE router and includes the label in the network reachability information for the prefix that it advertises to other PE routers. When a PE router forwards a packet received from a CE router across the provider network, it labels the packet with the label learned from the destination PE router. When the destination PE router receives the labeled packet, it pops the label and uses it to direct the packet to the correct CE router. Label forwarding across the provider backbone is based on either dynamic label switching or traffic engineered paths. A customer data packet carries two levels of labels when traversing the backbone

NEW QUESTION: 3

- A. Option A
- B. Option F
- C. Option D
- D. Option B
- E. Option C
- F. Option E

Answer: F

Explanation:

This static route will allow for communication to the Manchester workstations and it is better to use this more specific route than a default route as traffic destined to the Internet will then not go out the London Internet connection.
