NEW QUESTION: 1
SIMULATION
How would an administrator quickly check field accessibility?
Answer:
Explanation:
See the solution below
Explanation/Reference:
1. Field Accesibility Grid
2. View by: fields, profiles, record type

NEW QUESTION: 2
Which performance appraisal method would be used most

effectively in a large, geographically dispersed organization
with many similar jobs?
A. Forced ranking
B. Field review
C. Critical incident
D. Behaviorally anchored rating system
Answer: D
Explanation:
Answer option D is correct.The BARS system is used most
effectively in organizations when a number of jobs have similar
duties. Because it is expensive and time-consuming to
implement, an organization must have enough resources available
to develop the program. Critical-incident appraisal tools (B)
are most effectively used by managers who have daily
interaction with subordinates. Forced ranking (C) is best for
use in organizations with fewer than 100 employees because it
becomes unwieldy for large groups. Field reviews (A) are
conducted by someone other than a direct supervisor. Chapter:
Human Resource Development Objective: Review Questions

NEW QUESTION: 3

A. Option B
B. Option C
C. Option A
D. Option D
Answer: A
Explanation:
The TransactionScope class establishes an ambient transaction
in .NET. (An "ambient transaction" is one that lives in the
current thread.) All connections opened within the
TransactionScope participate in the transaction. If different
databases participate, the transaction is automatically
elevated to a distributed transaction. The outcome of the
transaction is controlled by setting the scope to complete to
indicate a commit.
Note: Elastic database transactions for SQL DB enable
applications to make atomic changes to data stored in several
different SQL Databases.
Elastic database transactions targets the following scenarios:
* Multi-database applications in Azure: With this scenario,
data is vertically partitioned across several databases in SQL
DB such that different kinds of data reside on different
databases. Some operations require changes to data which is
kept in two or more databases. The application uses elastic
database transactions to coordinate the changes across
databases and ensure atomicity.
Etc.
