Answer: A

Explanation:

The AWS Documentation mentions the following

AWS Identity and Access Management (IAM) now makes it easier for you to control access to your AWS resources by using the AWS organization of IAM principals (users and roles). For some services, you grant permissions using resource-based policies to specify the accounts and principals that can access the resource and what actions they can perform on it. Now, you can use a new condition key, aws:PrincipalOrglD, in these policies to require all principals accessing the resource to be from an account in the organization Option B.C and D are invalid because the condition in the bucket policy has to mention aws:PrincipalOrglD For more information on controlling access via Organizations, please refer to the below Link:

<https://aws.amazon.com/blogs/security/control-access-to-aws-resources-by-using-the-aws-organization-of-iam-principal> (The correct answer is: Ensure the bucket policy has a condition which involves aws:PrincipalOrglD Submit your Feedback/Queries to our Experts
