Answer: D

Explanation:

Explanation

As with standard upgrades to Oracle Grid Infrastructure, at any given point in time for normal operation of the cluster, all the nodes in the cluster must have the same software release and patch level. Because one-off patches can be applied as rolling upgrades, all possible patch levels on a particular software release are compatible with each other.

Note: Starting with Oracle Grid Infrastructure 12c Release 1 (12.1), a new cluster state called "Rolling Patch" is available. This mode is similar to the existing "Rolling Upgrade" mode in terms of the Oracle ASM operations allowed in this quiesce state.

NEW QUESTION: 2

Your network consists of an Active Directory forest that contains only domain controllers that run Windows Server 2003. You need to prepare the environment for the implementation of a new Windows Server 2008 domain in the forest.

What should you do?

A. Run adprep /domainprep on the infrastructure operations master.

B. Run adprep /forestprep on the infrastructure operations master.

C. Run adprep /domainprep on the schema operations master.

D. Run adprep /forestprep on the schema operations master.

Answer: D

Explanation:

Explanation/Reference: To create a new Windows Server 2008 domain in the forest, you need to run adprep /forestprep on the

schema operations master. You can prepare the forest by running adprep /forestprep on the server that holds the schema master operations master role (also known as flexible single master operations or FSMO) to update the schema.

Reference: Installing an Additional Windows Server 2008 Domain Controller
