The domain contains two organizational units (OUs) named OU1
and OU2 in the root of the domain.
Two Group Policy objects (GPOs) named GPO1 and GP02 are
created. GPO1 is linked to OU1. GPO2 is linked to OU2.

to User1 when User1 logs on.
What should you configure?

A. Item-level targeting
B. The GPO Status
C. WMI Filtering
D. GPO links
Answer: D
Explanation:
A GPO can be associated (linked) to one or more Active Directory containers, such as a site, domain, or organizational unit. Multiple containers can be linked to the same GPO, and a single container can have more than one GPO linked to it. If multiple GPOs are linked to one container, you can prioritize the order in which GPOs are applied. Linking GPOs to Active Directory containers enables an administrator to implement Group Policy settings for a broad or narrow portion of the organization, as required.
